

Danger Level 1 - Low

Tendency: Constant avalanche danger →
on Thursday 08 02 2024

The avalanche conditions are mostly favourable. Gliding avalanches and moist loose snow slides are possible however still in isolated cases.

A clear night will be followed in the early morning by favourable avalanche conditions generally. From the middle of the day only isolated small gliding avalanches and moist snow slides are possible.

In many places there is a danger of falling on the hard crust.

Snowpack

Sunny slopes: The surface of the snowpack will freeze to form a strong crust and will hardly soften at all.

Shady slopes: Towards its surface, the snowpack is faceted and its surface consists of loosely bonded snow lying on a resilient crust.

Above approximately 2000 m there are 30 to 50 cm of snow, and even more in some localities. At low altitude from a snow sport perspective, insufficient snow is lying.

Tendency

Thursday: The avalanche conditions remain favourable.
